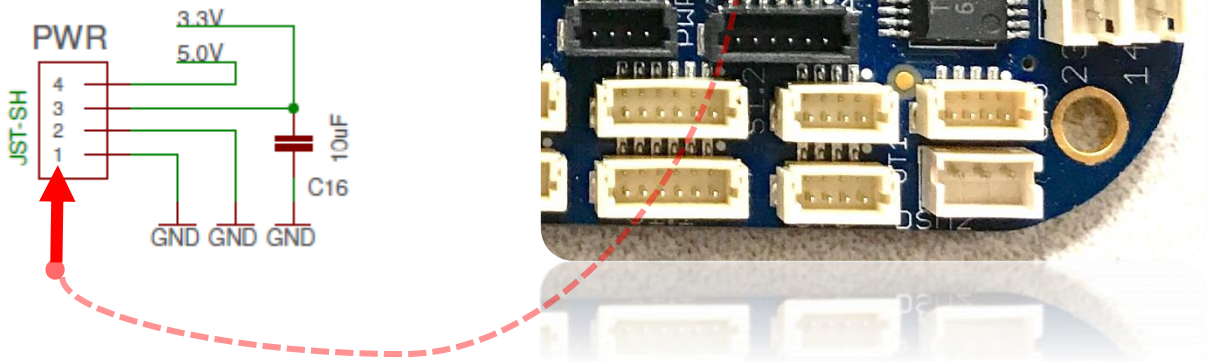
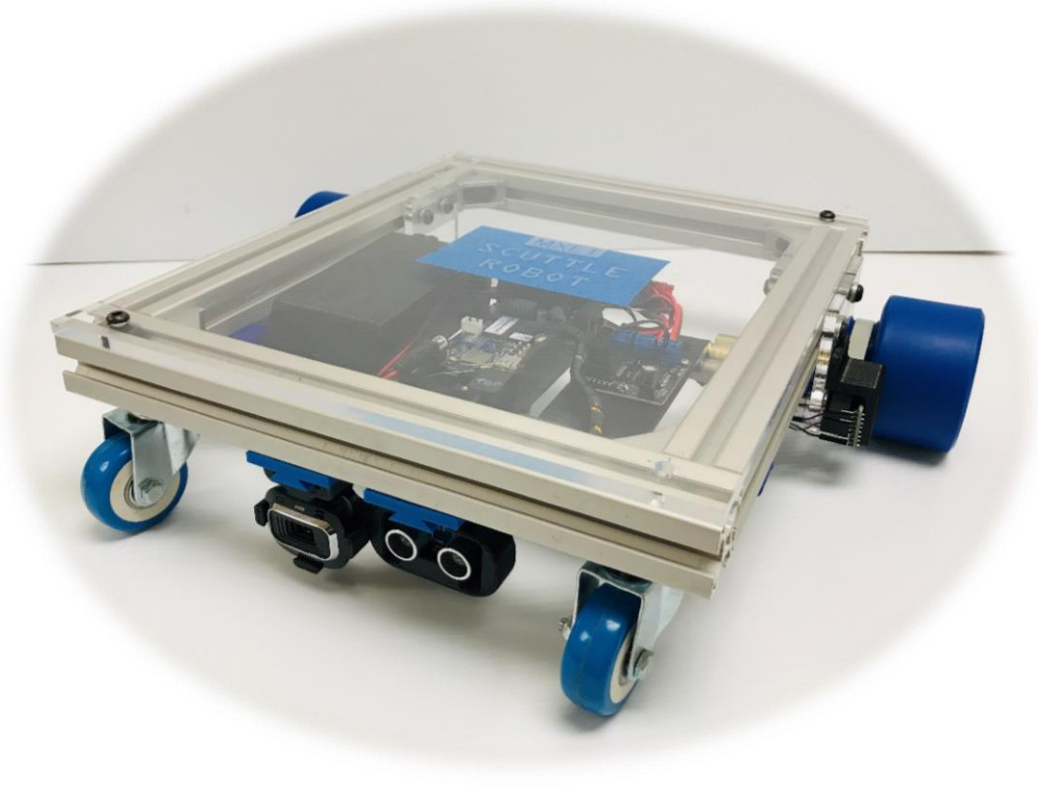
Scuttle robot Wiring Guide (rev 2019.11.17)

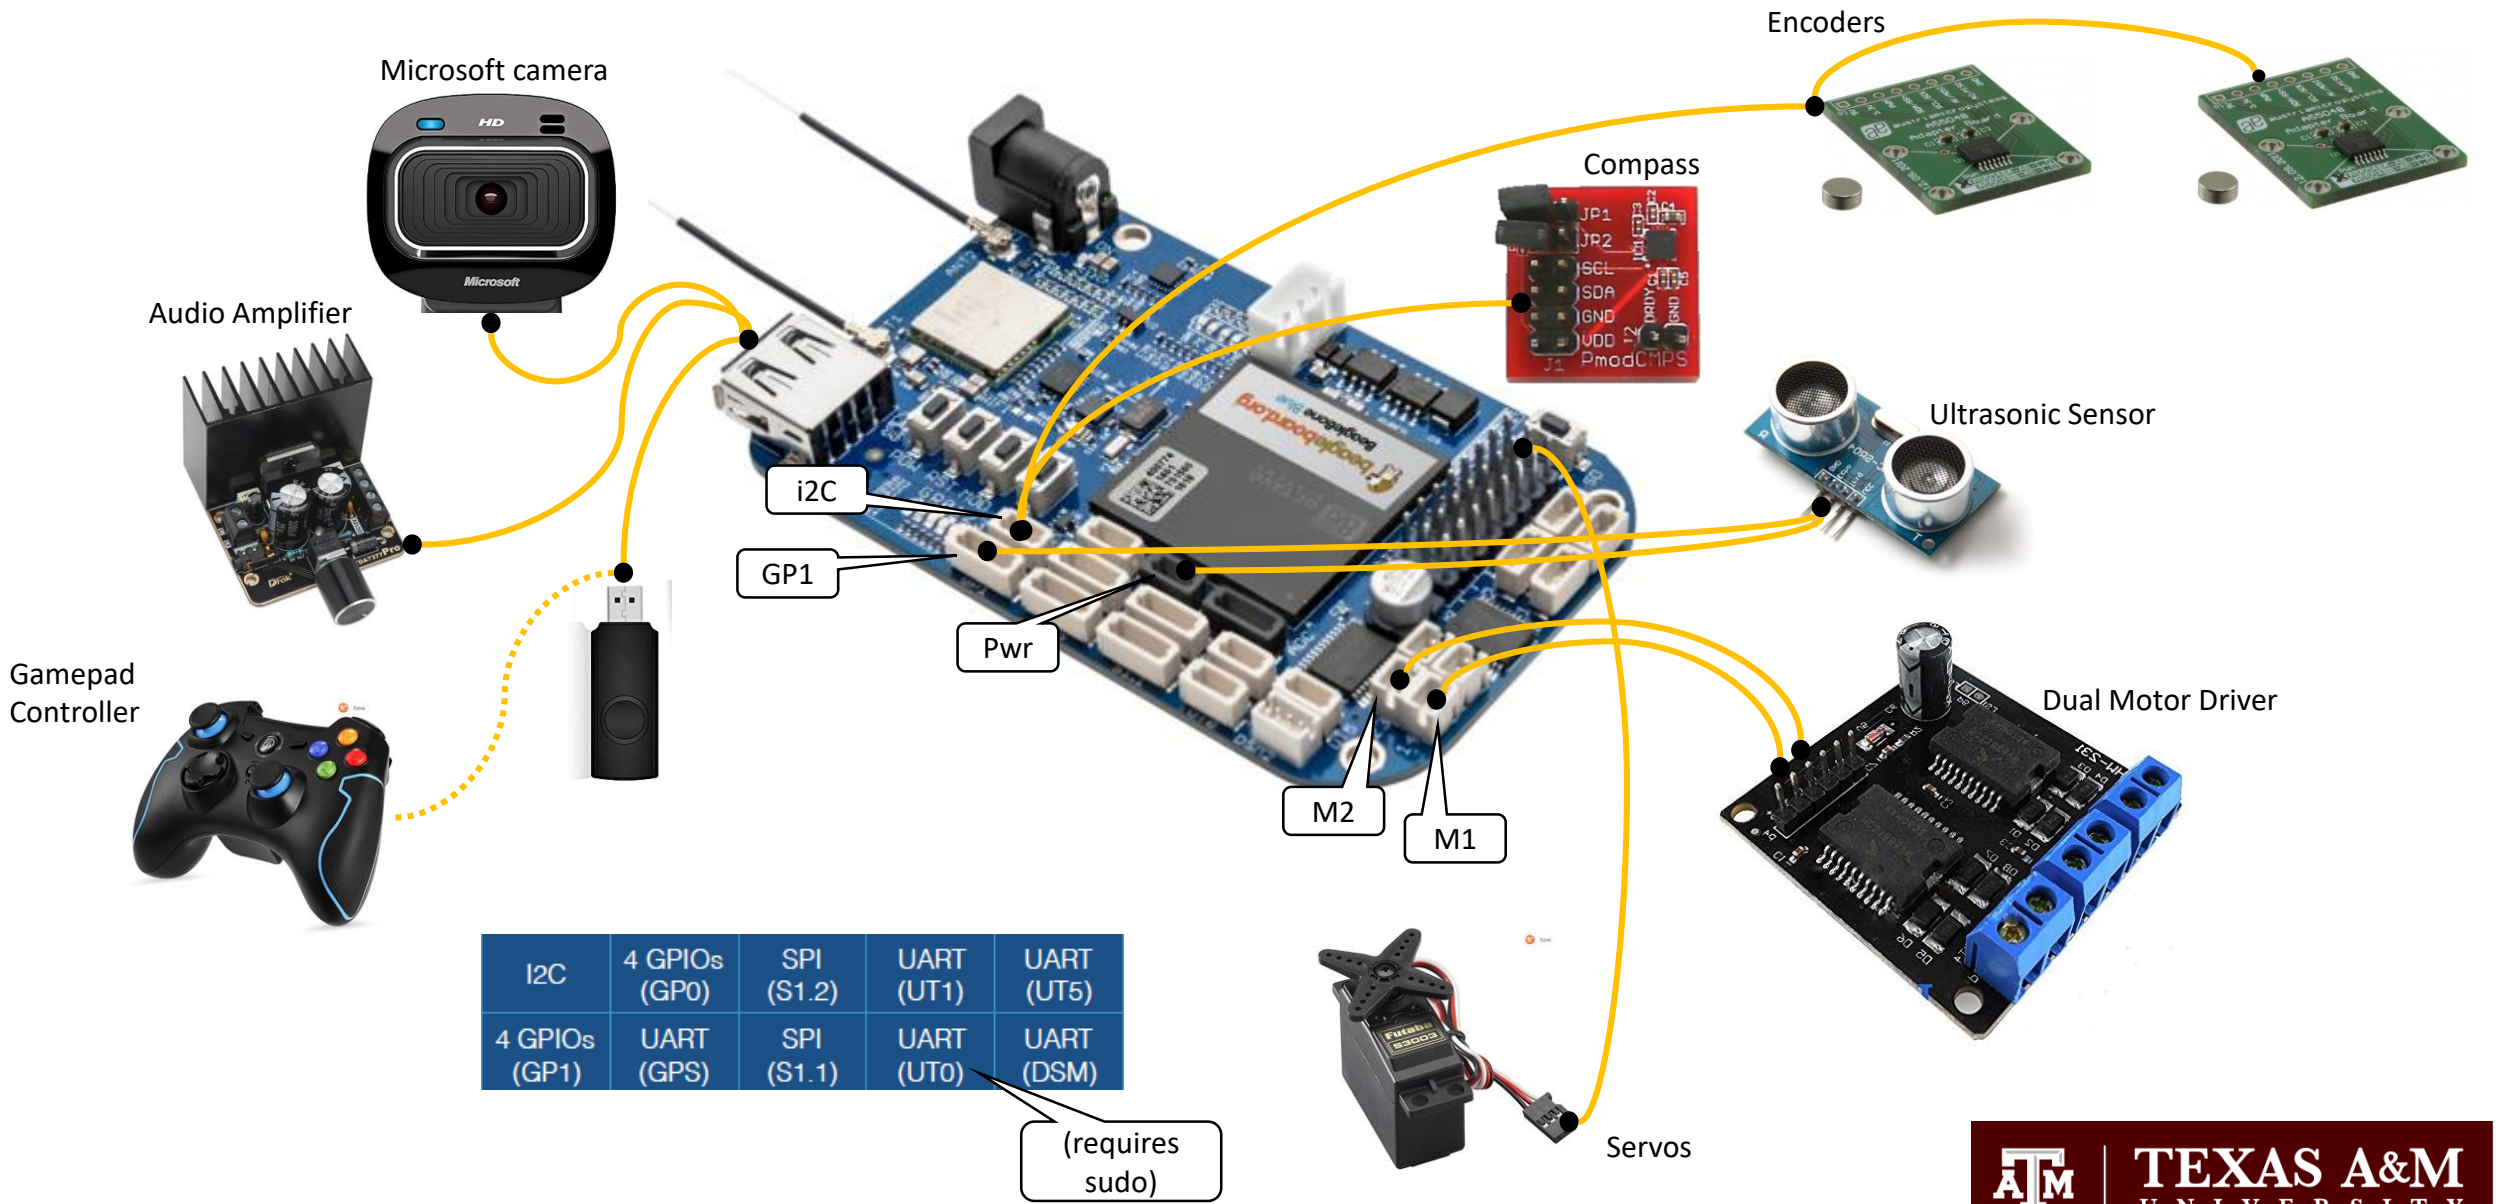
Important Info:
To match the beaglebone pins to the pin numbers on the diagram:
The tiny white circle on the silkscreen at each connector indicates “pin1”

All images of this style are copied directly from the beaglebone schematic





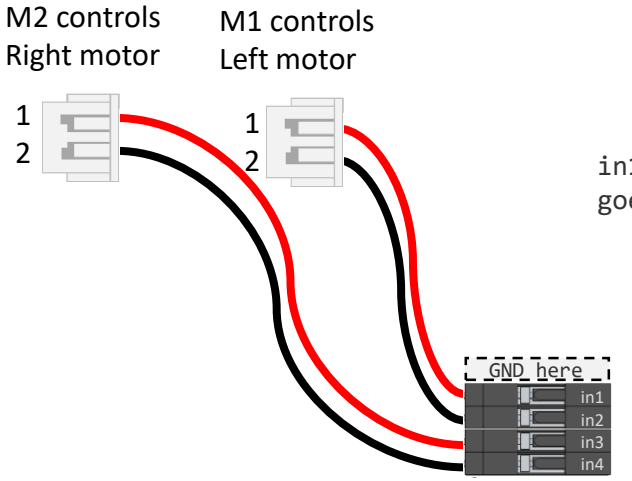
All Sensors & Actuators



I2C	4 GPIOs (GP0)	SPI (S1.2)	UART (UT1)	UART (UT5)
4 GPIOs (GP1)	UART (GPS)	SPI (S1.1)	UART (UT0)	UART (DSM)

TEXAS A&M UNIVERSITY

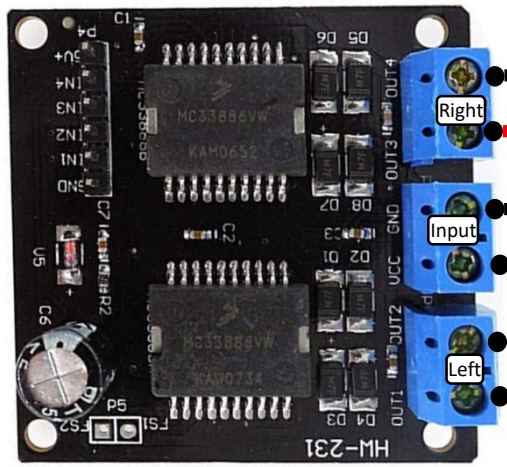
Motor Driver Signal Cables

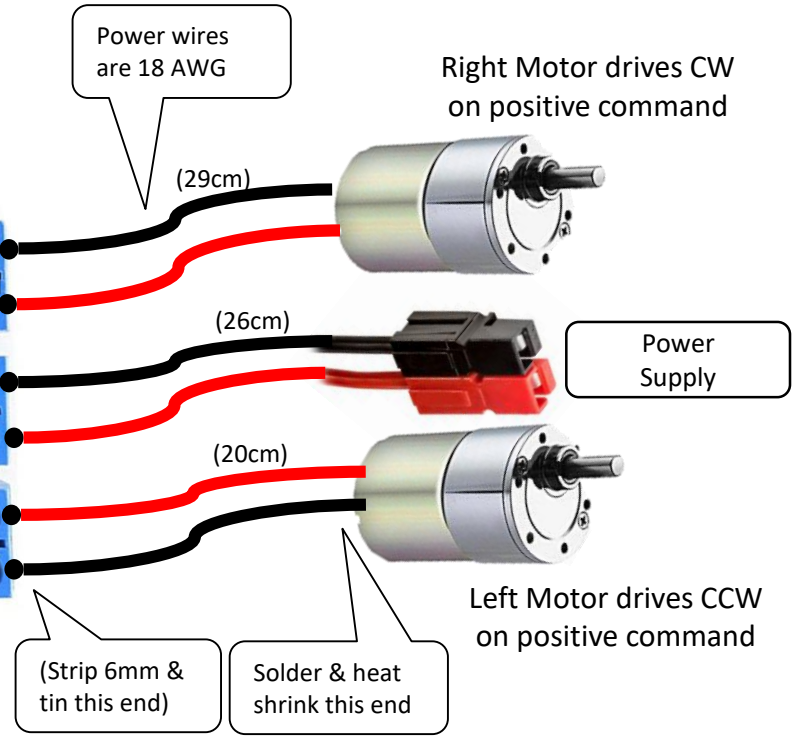


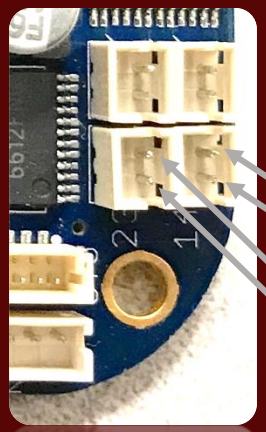
Ground is not connected because the BBB has a common ground to the battery pack.

in1 on DuPont connector goes to in1 on driver

Motor Driver Top View
HW-231 Motor Driver







Pin 1 should be HIGH when motor is driven FORWARD

Motor1 Pin1
Motor1 Pin2

Motor2 Pin1
Motor2 Pin2

The hardware design convention is pin 1 gets the square solder pad.

BeagleBone I2C Connector
Style: JST-SH 4-pin

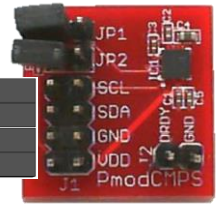
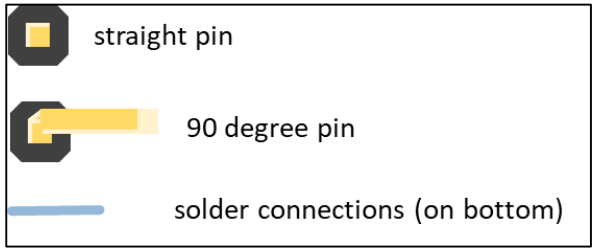
Nodes on the I2C bus board are indicated here

Compass

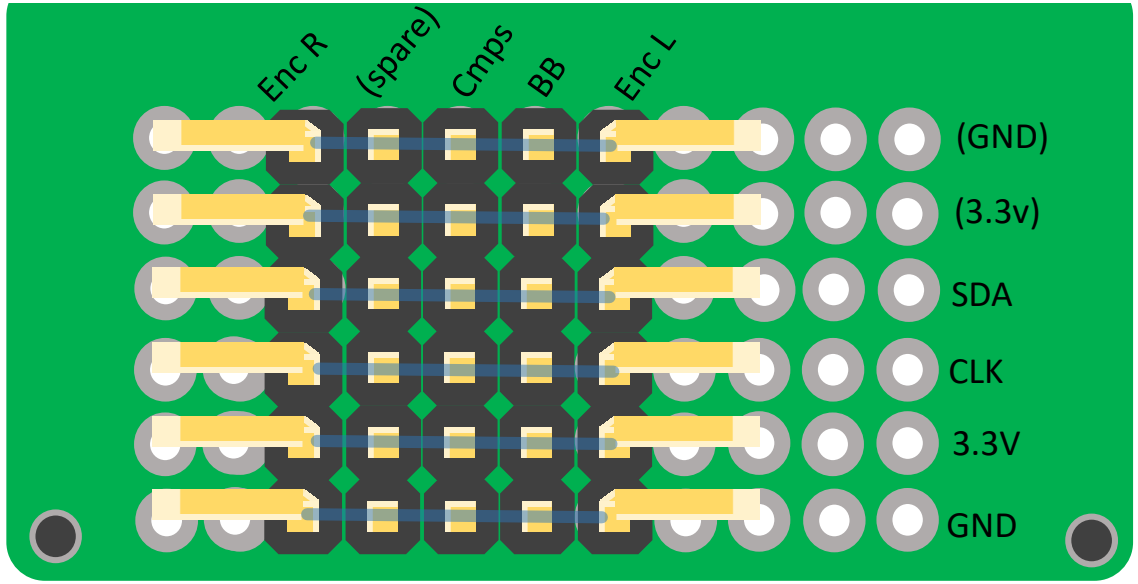


I2C Bus Board

The board is made from a breadboard and soldered manually. The board can be cut between rows J & K. The solder bridges all pins from left to right.



Rear of robot



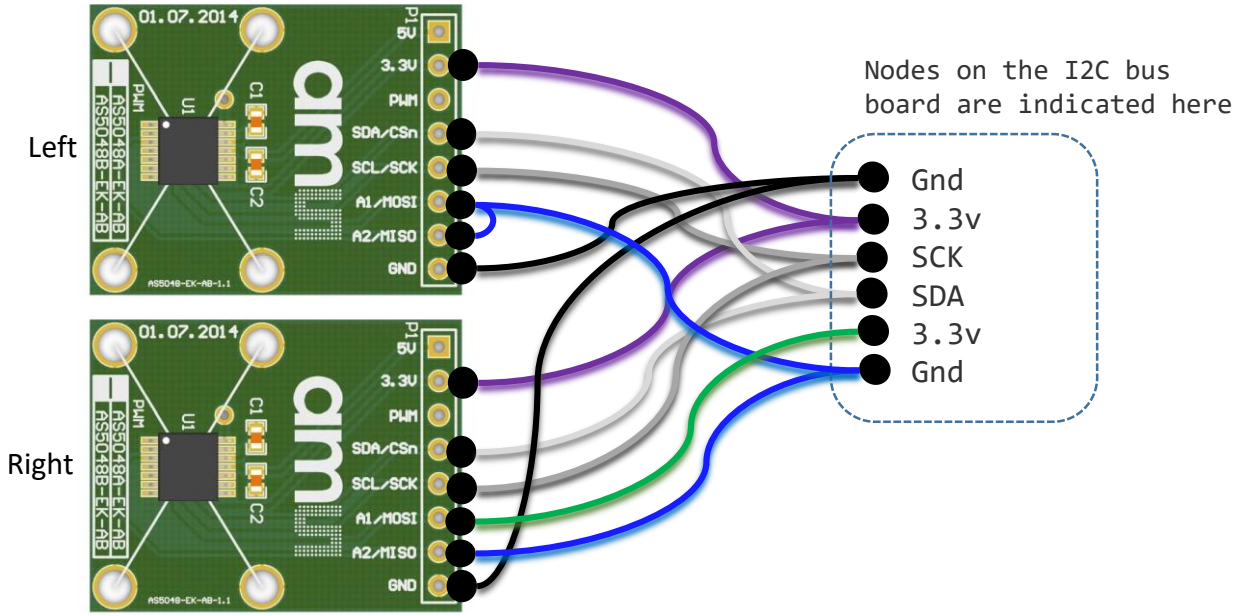
Front of robot

Screw Hole

Encoder AS5048 (I2C)

Left Hand Encoder
A1 is pulled **down** to GND
I2C address is 0x40

Right Hand Encoder
A1 is pulled **up** to 3.3v
I2C address is 0x41



PIN	Left	Right
A1	0 (low)	1 (high)
A2	0 (low)	0 (low)
i2C Address	0x40	0x41

On the Left Hand Encoder PCB, bridge the pins A1 and A2 using solder, to each other.

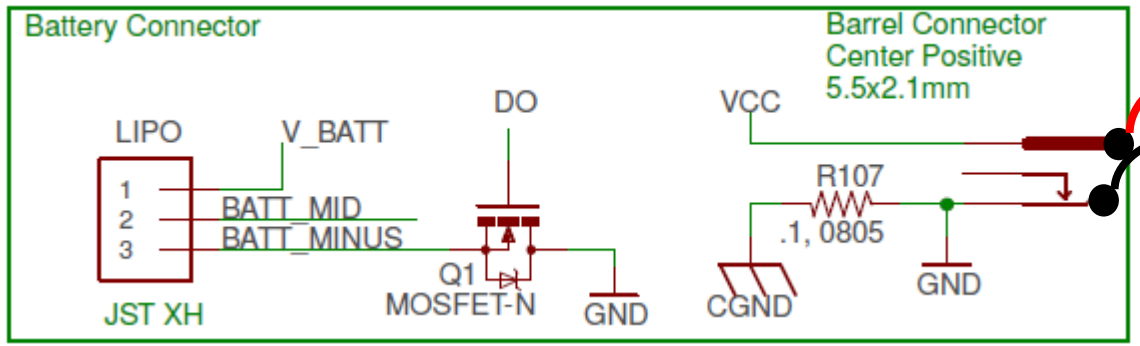
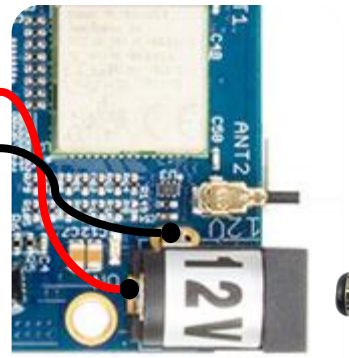
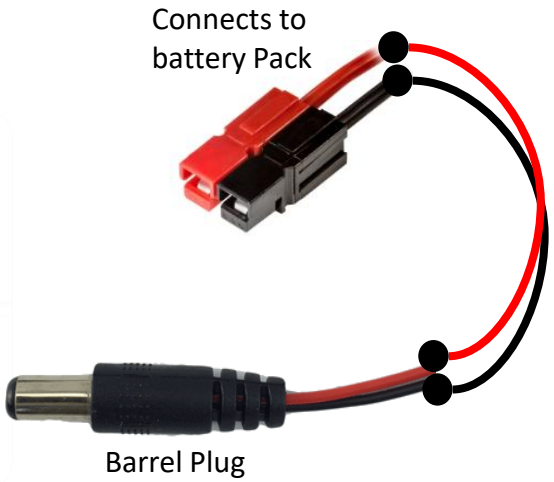
Battery



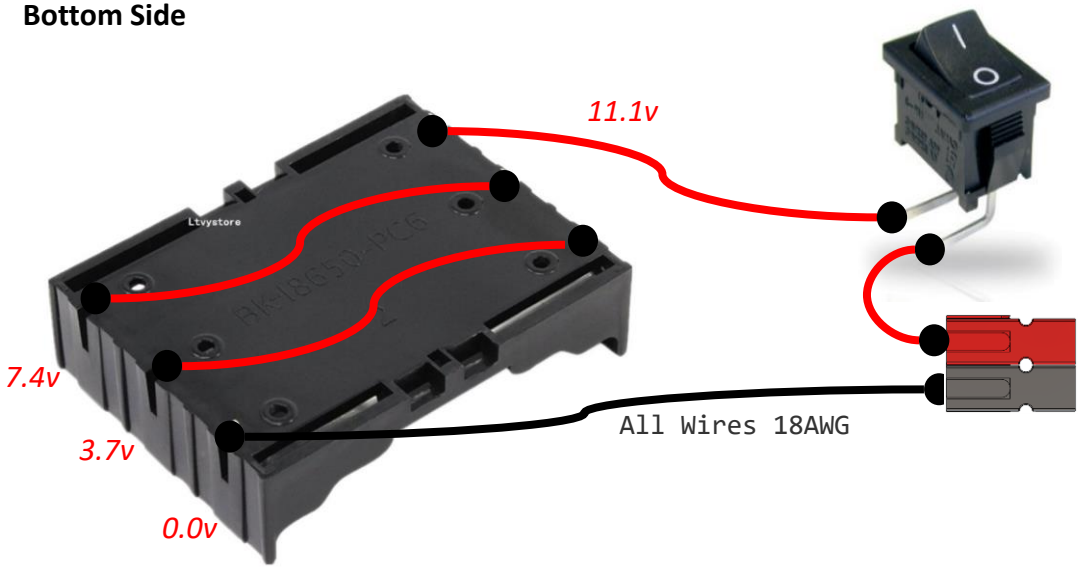




The "Battery Connector" is disconnected. Actual battery uses Barrel Connector.

Battery Pack

Bottom Side



3-Cell 18650 holder

Switch PN:SRB22A2FBBNN
Carries 10A max

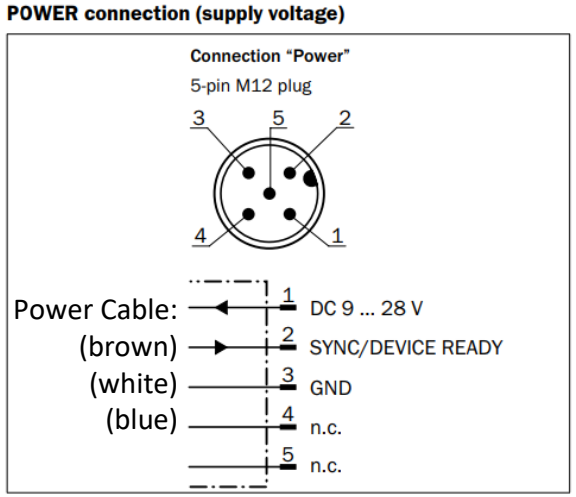
Two pairs of Anderson connectors are attached here.

LIDAR

Lidar Device

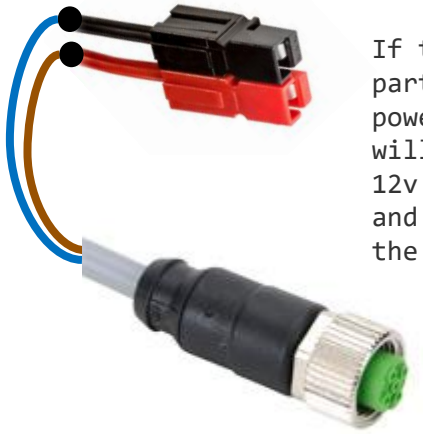
TiM 561

Power Connector Diagram (lidar side)



LIDAR-side connector (male pins)

Power Cable Diagram (plugs into lidar)



If the indicated cable part number is used for power to the lidar, brown will be crimped into the 12v positive APP terminal and blue is crimped into the negative.

Cable: 7000-12241-2150300

Cable-side connector (female pins)

Typical Lidar power consumption: 2.1w

TEXAS A&M UNIVERSITY

GamePad

Button Behavior:

- not pressed: 0
- Pressed: 1

Axis behavior:

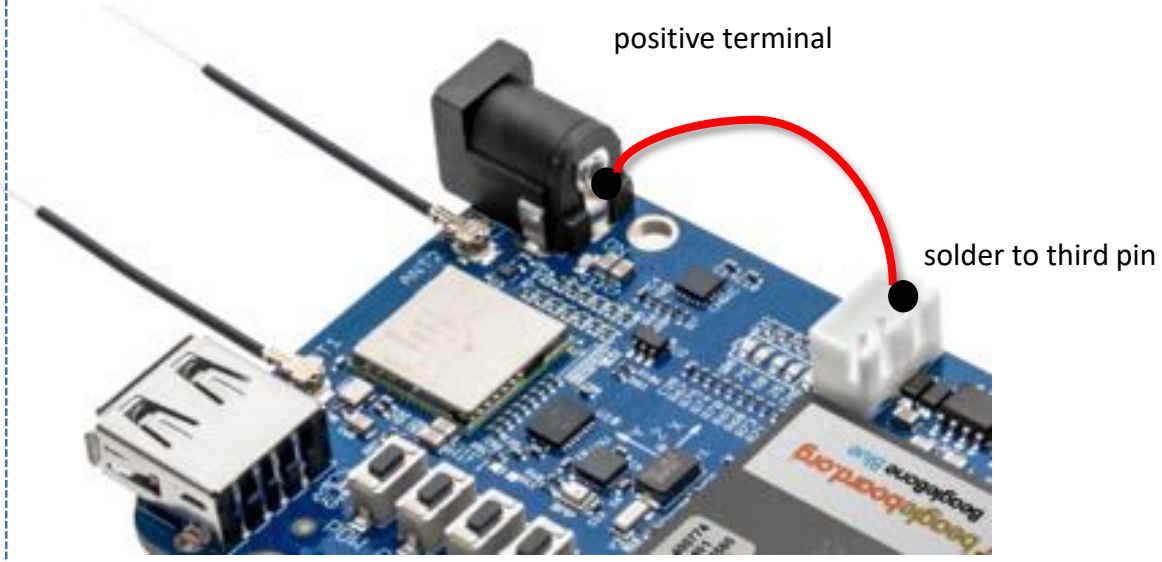
- Right returns positive values
- down returns positive values

```
# Get Button States
x_button = joystick.get_button( 3 )
l_button = joystick.get_button( 6 )
r_button = joystick.get_button( 7 )
```

```
l_joy_x = joystick.get_axis( 0 )
l_joy_y = joystick.get_axis( 1 )
```

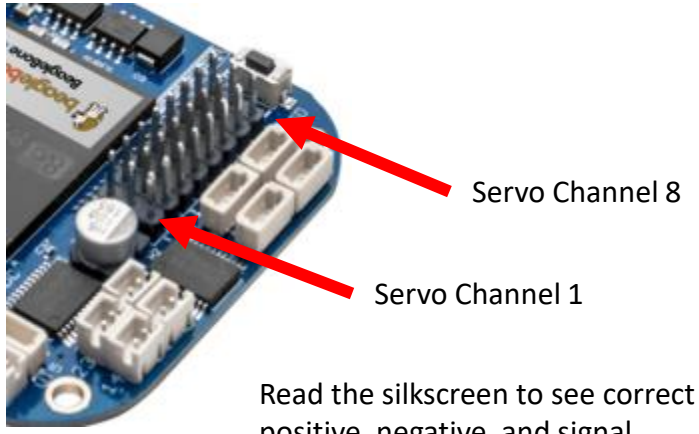
Servos

Bridge Power to the liPo connector



Without a power source available at the positive (third pin) input of the liPo connector, the board has insufficient current available to the servos to drive servos at full torque or to drive multiple servos.

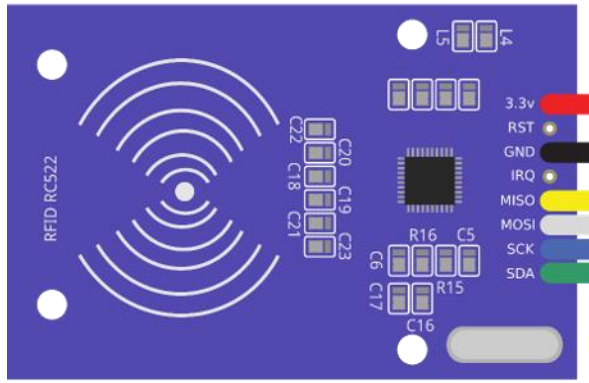
A safe fix is to solder the positive terminal of the DC jack to the third pin of the connector shown. When a battery is connected, the pins correspond to 0.0v, 3.7v, and 7.2v terminals of a 2-cell lipo.



Read the silkscreen to see correct connector orientation for positive, negative, and signal.

RFID reader

RC522 low-cost
RFID Scanner



Plug into 6-pin JST-SH port on bbb.
